

TapeView

Computer Management Services

TapeView, Sedona Technologies Computer Management Service optimizes your tape mounted information resulting in a more productive and proficient tape operation. *TapeView* efficiently communicates tape mounted information to tape operations personnel reducing the time and cost associated with mounting tapes in a large computer facility.

By centralizing your tape mounted messages, *TapeView* allows your tape handlers to quickly obtain needed information at a glance improving operator response time. In addition, *TapeView* effectively displays color-coded information via large-screen color monitors strategically placed around the data center.

TapeView

TapeView allows you to view statistical reports in online format via a web browser, printed format, or in exported format for viewing and printing from another PC. With *TapeView*, a myriad of reports and graphs can be produced on an as-required or scheduled basis allowing you to better manage tape mount information.

Whatever your tape environment - cartridge, reel, auto loaders, optical, robotics, or a jukebox disk device, *TapeView* offers flexibility and versatility in adapting to a wide variety of operating environments.

How TapeView Benefits You

- Improves tape operator efficiency
- Improves service of tape requests
- Reduces time and effort in locating tapes
- Reduces operator effort with multiple monitors
- Conveniently provides mount information to tape operators anywhere in the library
- Provides one location for information from multiple systems
- Frees up staff for other mission critical activities
- Reduces operator strain
- Reduces tape mount errors
- Improves operator response time to system failures
- Simplifies operator tasks by displaying only need-to-respond messages
- Optimizes operator response to the most critical messages first
- Improves use of system resources
- Enhanced management of system performance
